

Eduardo Rico Moreno

FCRC Consultant | Data Science | Financial Risk & Big Data

+34 694 425 575 • Madrid, España • rm.eduardo25@gmail.com

PROFESSIONAL EXPERIENCE

Management Solutions

Madrid , Spain

FCRC Consultant

September 2025 – Present

- Develop data solutions in Big Data environments for financial institutions using Python, building analytical notebooks, models and scalable processing engines.
- Design and maintain ETL pipelines and data quality workflows to integrate, cleanse and prepare data for advanced analytics and segmentation.
- Build BI dashboards with Amazon QuickSight and support the migration of data assets from on-premise systems to cloud environments.

EDUCATION

Universidad Pontificia Comillas - ICADE

Madrid, Spain

Master in Business and Financial Consulting

- February 2026 – Present

University Polytechnic of Valencia

Valencia, Spain

BSc in Data Science

- September 2021 - September 2025
- Final Thesis (10/10): Classification of patients into different levels of cognitive impairment based on brain MRI.
- Relevant Courses: Predictive Models, NLP, Statistical Analysis, Data Visualization.

LANGUAGES

- **English** – B2 Level (Cambridge Certificate)
- **French** - B2 Level (Cadre européen commun de reference pour les langues)

SKILLS AND INTERESTS

Technical Skills

- Programming: Python, R, SQL, MATLAB.
- Cloud & Data Platforms: AWS (SageMaker, Athena, QuickSight)
- Tools: Google Workspace, Excel, APIs, Streamlit.

PROJECTS

Classification of Cognitive Impairment from Brain MRI

- Developed a deep learning pipeline to classify cognitive impairment using MRI data from the ADNI dataset.
- Designed a reproducible preprocessing and harmonization pipeline for heterogeneous imaging series and implemented patient-level validation to prevent data leakage.
- Combined imaging data with clinical variables (e.g., age) to improve classification between cognitively normal, mild cognitive impairment and dementia patients.

Oppositional Thinking Analysis

- NLP project that classifies text into conspiratorial or critical narratives.
- The project explores transformer-based models and classical methods, comparing their performance.

Valenbisi Navigator

- Developed a web application to facilitate bike rental navigation across Valencia using real-time station availability data.
- Built with Streamlit, using python and API integration.
